MESSAGE

Agriculture plays a pivotal role in the economy of Bangladesh. This sector alone contributes more than 15% of annual GDP of the country. In addition, it offers both the opportunities of employment and livelihood to a large extent. the peformance of this sector has impacted on micro economics also maintained progress in SDG gaols.

I am happy to know that Bangladesh Bureau of Statistics is going to publish the "45 years Agricultue Statistics of Major Crops (Aus, Amon, Boro, Jute, Potato andWheat)". It is large volume of secondary data of Major Crops in Bangladesh. This publication is providing opportunity for stakeholders or researchersto plan, review data needs, evaluate the degree of integration of the agricultural sector.

I take the opportunity to extend my cordial thanks to Mr. Saurendra Nath Chakrabhartty, Secretary, Statistics and Informatics Division (SID), Ministry of Planning for his effective guidance for developing this publication. I also thank Mr. Md. Amir Hossain, Director General, BBS and all other officials who were involved in preparation of this document for their efforts.

I hope that this report will be great benefit to the users and stakeholders in understanding the progress of this sector and to take necessary steps for its development.

MESSAGE

It is a great pleasure for me to know that Bangladesh Bureau of Statistics (BBS) has successfully prepared "45 years Agriculture Statistics of Major Crops (Aus, Amon, Boro, Jute, Potato and Wheat)"under the overall guidance of Statistics and Informatics Division (SID).

It is worth mentioning that the economy of Bangladesh depends largely on the broad agriculture sector. Reliable statistics is indispensable for policy formulation of this sector. I believe that the 45 years Agricultue Statistics of Major Crops (Aus, Amon, Boro, Jute, Potato andWheat)" will provide data significantly to the policy makers and other stakeholders in this field and measuring SDG's goal.

I hope this report will be a useful guideline or reference for the concerned ministries, and departments those interested in improving the current agricultural statistics using modern technologies.

I would like to thank Mr. Saurendra Nath Chakrabhartty, Secretary, Statistics and Informatics Division, Ministry of Planning for his guidance for this strategic plan.

I also appreciate Mr.Md. Amir Hossain, Director General, BBS and his colleagues for preparing and publishing this agriculture statistics at the shortest possible time.

Dhaka,

Government of the People's Republic of Bangladesh

FOREWORD

The agricultural and rural sector in Bangladesh has particular importance for the sustained food and livelihood security of its large, dense and ever-growing population. The agricultural activities in the country are pursued intensively for the crop as well as allied sectors and in conditions of scarce natural resources. The statistics Act 2013 stressed on the availability of statistics of the broad agricultural sector for planning and policy making. The National Strategy for the Development of Statistics (NSDS) also suggested for the development of a unified National Statistical System (NSS) in Bangladesh to meet the crying needs of statistics focucing evidence based policy making for the development of the country.

With the perview of development of agricultural statistics in the country, Bangladesh Bureau of Statistics (BBS) of the Statistics and Informatics Division (SID), Ministry of Planning as National Statistical Organization has taken necessary measures to improve the quality of statistics and enhance the coverage of agricultural statistics.

This is the first time Bangladesh Bureau of statistics take initiative to publish 45 years agricultural data in a publication. This publication contain major crops data from 1969-70 to 2014-15. This publication highlights data on major crops (Aus, Amon, Boro, Jute, Potatoand Wheat) area and production.

This publication covers a wide spectrum of statistics and indicators belonging to serve as a reference guide to policy-makers, economists, analysts, academics, educationists, researchers and other stakeholders. I hope this publication will be very useful in understanding the wide variety of perspectives of this sector.

I appreciate the work carried out by Bangladesh Bureau of Statistics (BBS) and would like to express my sincere thanks to Mr. Md. Amir Hossain (Additional Secretary) Director General, BBS for his active stewardship in this case. I also acknowledge hard works and the sincere efforts of officials of AgricultureWing of BBS who were involved in this exercise. I expect that the users shall continue providing valuable feedback and suggestions for further improvement of such publication since BBS has been striving for excellence

Dhaka,
January, 2018

Saurendra Nath Chakrabhartty
Secretary

Director General (DG)
Bangladesh Bureau of Statistics (BBS)

PREFACE

Agriculture and Rural sectors play the pivotal role in the economic development of the country. For better planning, we need reliable statistics. Bangladesh Bureau of Statistics (BBS) has successfully prepared "45 years Agricultue Statistics of Major Crops (Aus, Amon, Boro, Jute, Wheat and Potato)". Bangladesh Bureau of Statistics (BBS) provides agriculture statistics throught this publication for the first time. Agriculture Wing of Bangladesh Bureau of Statistics is responsible for accumulating, compiling and disseminating major crops (Aus, Amon, Boro, Jute, potato and wheat) statistics and other agriculture related data. This report contains statistics on crop production area, Estimates and yield ratefrom 1969-70 to 2014-15.

I express my gratitude and sincere thanks to Mr. Saurendra Nath Chakrabhartty, Secretary, Statistics and Informatics Division, Ministry of Planning for his active guidance and support. I appreciate Mr. Abul Basher Md. Arshad Hossain, Deputy Director General, BBS for providing his valuable efforts for finalizing the report. I also express my special thanks to Mr. Jafor Ahmed Khan, Director, Agriculture Wing, BBS for final compilation of this report. I would like to extend my sincere thanks to all officers and staff of Agriculture Wing for their hard work on preparing this publication.

I hope this book will be very useful to the planners, researchers, policy makers, NGOs, development partners and other users in their endeavours towards the agricultural development of the country. Any comment and suggestion for further improvement of this publication will be highly appreciated.

Dhaka
January, 2018

Md. Amir Hossain
(Additional Secretary)

Director
Agriculture Wing
Bangladesh Bureau of Statistics

ACKNOWLEDGEMENTS

I would like to express my sincere gratitude to Saurendra Nath Chakrabhartty, Secretary, Statistics and Informatics Division, Ministry of Planning for his continuous support and guidelines for preparing the '45 years Agriculture Statistics' of Major Crops (Aus, Amon, Boro, Jute, Potato and Wheat)'.

I am indebted to Mr. Md Amir Hossain, Director General, BBS for his all-out support and contribution to implement this valuable task. I deeply acknowledge the encouragement and continuous support of Mr. Abul Basher Md. Arshad Hossain, Deputy Director General for successfully completing this publication.

I acknowledge the valuable contributions and suggestions of. Mr. Bidhan Baral, Director of FA & MIS (Finance), BBS deserves special thanks for his significant effort. I also thank to Mr. Md. Abdul Halim, Deputy Director and Ms. Shaleha Khatun, Deputy Director, Mr. Md. Akther Hassan Khan, Deputy Director, Ayeasha Akther Mily, Statistical Officer of Agriculture Wing, BBS for their hard work and significant contribution to make this report successful.

I believe that the"45 years Agriculture Statistics of Major Crops (Aus, Amon, Boro, Jute, Potato and Wheat)" will be very timely in wide spectrum of statistics and indicators belonging to serve as a guide for policy-makers, economists, analysts, academics, educationists, researchers and other stakeholders.

Executive Summary

Agriculture remains the most important sector of Bangladeshi economy, contributing more than 15% percent to the national GDP and providing employment for 43% percent of the population.In Bangladesh there area6 main crops –Aus, Amon, Boro, Jute, Wheat andPotato.Rice is the staple food in the everyday diet of Bangladeshis. There are three types of rice namely Aus, Aman and Boro. Rice, Wheat& Potato play an important role in achieving self-sufficiency in food production. Jute, often called the "golden fibre" of Bengal, is one of the main export-earner for Bangladeshi agriculture, as Bangladesh remains the world's second-largest producer of jute (after India) and the world's largest exporter of fiber.

Bangladesh Bureau of Statistics provides reliable statistics of crops for six majorcropsand minor crops since its inception in 1974. BBS also provides bulk of data on crop sub-sector through conducting Agriculture Census that is mainly concerned with crop data and limited data of fisheries and livestock sub-sectors. Accordingto Statistics Act 2013, agriculture census will cover all crops, fisheries and livestock sub-sectors with due importance

45 years Agriculture Statistics of Major Crops (Aus, Amon, Boro, Jute, Potato and Wheat) is published with the data from 1969-70 up to 2014-15. This is the single largest source of agricultural series data. The major part of the report and relevant statistics that are collected from Yearbook of Agricultural Statistics, which is other publication of BBS.

The time series data (forty five year) on annual production Estimates like area under crop and total production of six major crops (aus, amon, boro, wheat, potato & jute) have been published in this report.

CHAPTER I

RICE

Rice is the staple food of about 150 million people of Bangladesh.It provides nearly 48% of rural employment, about two-third of total calorie supply and about one-half of the total protein intakes of an average person in the country. Rice sector contributes one-half of the agricultural GDP and one-sixth of the national income in Bangladesh.

Rice is the seed of the grass species Oryza sativa (Asian rice) or Oryza glaberrima (African rice). As a cereal grain, it is the most widely consumed staple food for a large part of the world's human population, especially in Asia. It is the agricultural commodity with the third-highest worldwide production.

Rice cultivation is well-suited to countries and regions with low labor costs and high rainfall, as it is labor-intensive to cultivate and requires ample water. However, rice can be grown practically anywhere, even on a steep hill or mountain area with the use of water-controlling terrace systems. Although its parent species are native to Asia and certain parts of Africa, centuries of trade and exportation have made it commonplace in many cultures worldwide.

Rice planting

Ripe rice

Rice harvesting

The traditional method for cultivating rice is flooding the fields while, or after, setting the young seedlings. This simple method requires sound planning and servicing of the water damming and channeling, but reduces the growth of less robust weed and pest plants that have no submerged growth state, and deters vermin. While flooding is not mandatory for the cultivation of rice, all other

methods of irrigation require higher effort in weed and pest control during growth periods and a different approach for fertilizing the soil.

Harvesting starts soon after the crop ripens to prevent rot or damage from weather or insects. Rice ripens in different times of the year, depending on variety, so that harvesting of one may begin while the other is yet to mature. In Bangladesh the harvesting time of rice in different seasons are: Aus (July-August), broadcast Aman (November-December), transplanted Aman (November-January), local boro (April-May), and high yielding boro (May-June). Harvesting can either be done manually with the use of hand harvesting tools, or mechanically, by harvesting machines (reaper, harvesters). In Bangladesh rice harvesting is done manually, using sickles (kanchi), consisting of a wooden handle and a knife blade (made of mild steel), the base of which is pushed into the wooden handle. The blade may be 20-30 cm long, having a serrated edge (15 serration per 2.5 cm, with teeth 1 mm long).

After harvesting it needs to process to get rice from the plant. Processing is done either manually or help of machine. After collecting rice now it dries in sun light for storage properly, otherwise it may affect by bacteria or fungus.

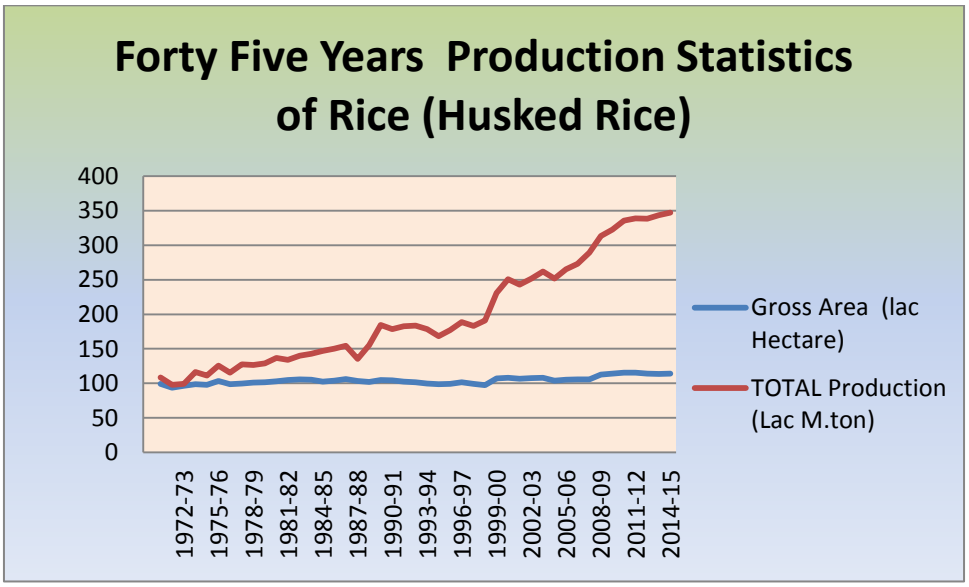

Rice is our major food which is use as different recipe. Using rice a wide range of delicious foods being produced in Bangladesh. Among them vat, muri, khai, biriani, polao, morog-polar, kacchi-biriani, payesh are produced widely. As a Bengali Nation we use different recipe of rice mostly as our daily foods. Rice is a nutritious and a carbohydrate food.

1.4 Line Graph of Aus rice production and Area from fiscal year 1970-01 to 2014-15

Line Graph of Aus rice average yield reat from fiscal year 1970-01 to 2014-15

1.5 The Production, area & yield rate of Aus crops have been shown in table

Estimates of Aus rice

CHAPTER II

JUTE

Jute is one of the most affordable natural fibers, has variety of uses as vegetable fibers. It'sScientific name is Corchorus. It is produced from plants in the genus Corchorus, which was once classified with the familyTiliaceae, more recently with Malvaceae, and has now been reclassified as belonging to the family Sparrmanniaceae. The primary source of the fibre is Corchorus olitorius, but it is considered inferior to Corchorus capsularis.[1] "Jute" is the name of the plant or fiber that is used to make burlap, Hessian or gunny cloth.

The fibers are off-white to brown, and 1–4 meters (3–13 feet) long. Jute is also called "the golden fiber" for its color and high cash value.. The suitable climate for growing jute (warm and wet) is offered by the monsoon climate. Temperatures from 20˚C to 40˚C and relative humidity of 70%–80% are favorable for successful cultivation. Jute requires 5–8 cm of rainfall weekly, and more during the sowing time. Soft water is necessary for the jute production.

The cultivation of jute is in difficult processes. The land is ploughed, harrowed and manured well before sowing seeds. Generally the seeds are sown in March and April after a shower. When the plants grow up a little, the fields are weeded out for several times. In three to four months the plants are matured. The matured plants are then cut down and put into water where they are rotten and dried under the sun. In this way the fiber of jute is obtained and made ready for sale and use

About 40 species of jute have been found, out of which only two species have got its main real commercial value as well as industrial use. Of the several species of jute, one is called Corchorus capsularis (white jute) and the other Corchorus olitorius (both tossa and deshi jute). The third type is known as Mestha which is the natural substitute of jute.

The importance of the jute sector to the Bangladesh economy, in particular, cannot be over-stated, it is a major cash crop for over three million small farm households, the largest industry, producing about one- third of manufacturing output, and the largest agricultural export commodity in Bangladesh. The livelihood of about 25 million people (almost one - fifth of the total population) is dependent on jute - related activities in agriculture , domestic marketing , manufacturing and trade .

It is one of the few crops which can be grown in the monsoon season, and can be rotated with rice to restore the soil fertility and structure. The leaves of jute plants enrich the fertility of the soil for sustained agriculture, and have good nutrition value as vegetables.

Use of jute sticks as fuel and fencing material as substitute for wood prevents deforestation. Therefore, given the increased global concern for the environment, the future prospects for jute remains high.

The world is going green. Hence most of the developed and also the developing countries have banned or going to ban the use of polythene bags as it is too harmful for a sustainable environment. Eco-concerns drive demand for biodegradable bags on the global market, giving rise to the exports of shopping jute bags from Bangladesh, the finest jute grower of the world.

- Jute fiber is 100% bio-degradable and recyclable and thus environmentally friendly.

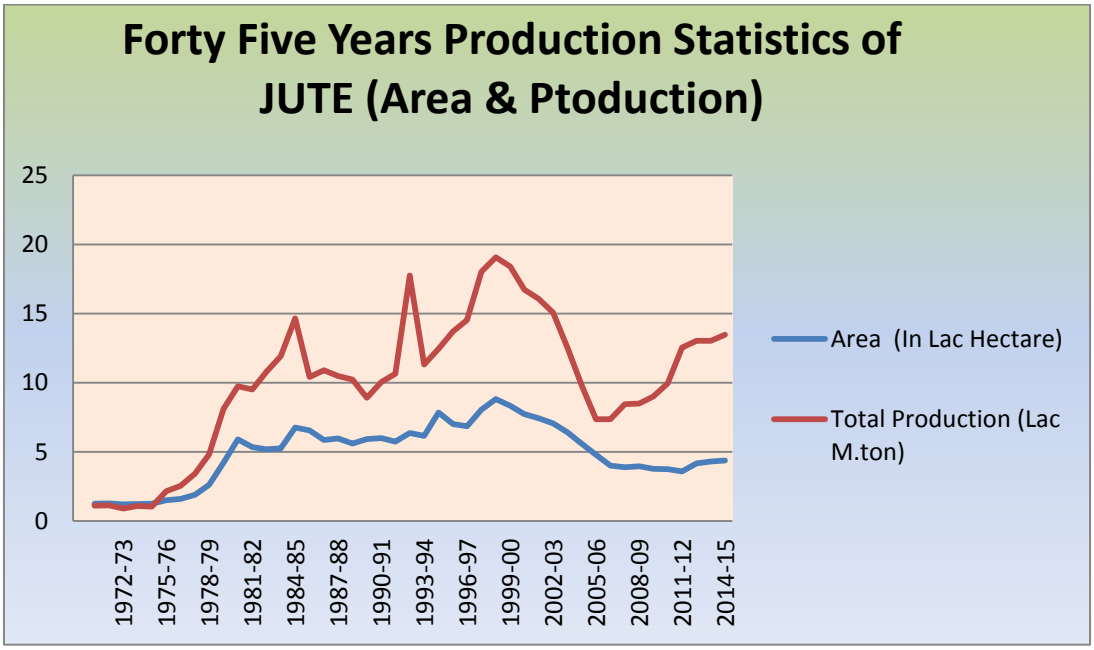

It is a natural fiber with golden and silky shine and hence called The Golden Fiber

CHAPTER III

POTATO

Potato is a cool-season vegetable that ranks with wheat and rice as one of the most important staple crops in the human diet around the world.
The English word potato comes from Spanish patata (the name used in Spain). The Spanish Royal Academy says the Spanish word is a compound of the Taíno batata and the Quechua papa (potato). The name potato originally referred to a type of sweet potato although the two plants are not closely related; in many of the chronicles detailing agriculture and plants, no distinction is made between the two. It'sBinomial nameis Solanum tuberosum.

The white potato is referred to as the "Irish potato" because it is associated with the potato famine in Ireland in the 19th century. Potatoes are not roots but specialized underground storage stems called "tubers." Maximal tuber formation occurs at soil temperatures between 60° and 70°F. The tubers fail to form when the soil temperature reaches 80°F. Potatoes withstand light frosts in the spring and can be grown throughout most of the country in the cooler part of the growing season, but they prefer the northern tier of states for maximal yield and quality

Potato plants

Flowers of a potato plant

potato

Potatoes are among the earliest vegetables planted in the garden. Early, midseason and late varieties all may be planted in March or early April. Planting too early in damp, cold soils makes it more likely that seed pieces rot before they can grow. Potatoes planted in March also may be frozen back to the ground by late frosts. Plants usually recover fully, but the blackened shoots are

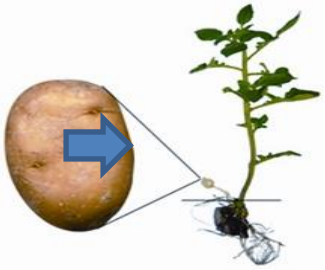

always demoralizing to the gardener. Medium-early plantings, when soils have dried and warmed, may do as well as extremely early, winter-defying plantings. Midseason and late varieties may be planted as late as the first of July. Late potatoes are best for winter storage.

Potato planting

Potato field (earlier time)

Potato

As the potato plants become mature and the tubers are fully formed, the leaves become gradually yellowish and then brownish, and finally the plants die. It is always better to harvest the crop after these signs are evident in the field. Most varieties are harvested in this country during February-March. Collection of the tubers is usually done in Bangladesh manually using a spade or other devices.

In volume of fresh product, the potato ranks first among the world's most important food crops. It is grown in almost all countries of the world. In many countries, including those of Europe, America, and Canada, potato is the staple food. Nearly 90% of the potato crop of the world is grown in Europe. In the last 2-3 decades, production of potato in Bangladesh has increased with the cultivation of high yielding varieties. Although the growing conditions are excellent, because of lack of desirable market, farmers do not like to grow more potatoes. Only a negligible portion of the total production is exported, while a substantial amount of seed potatoes are still imported.

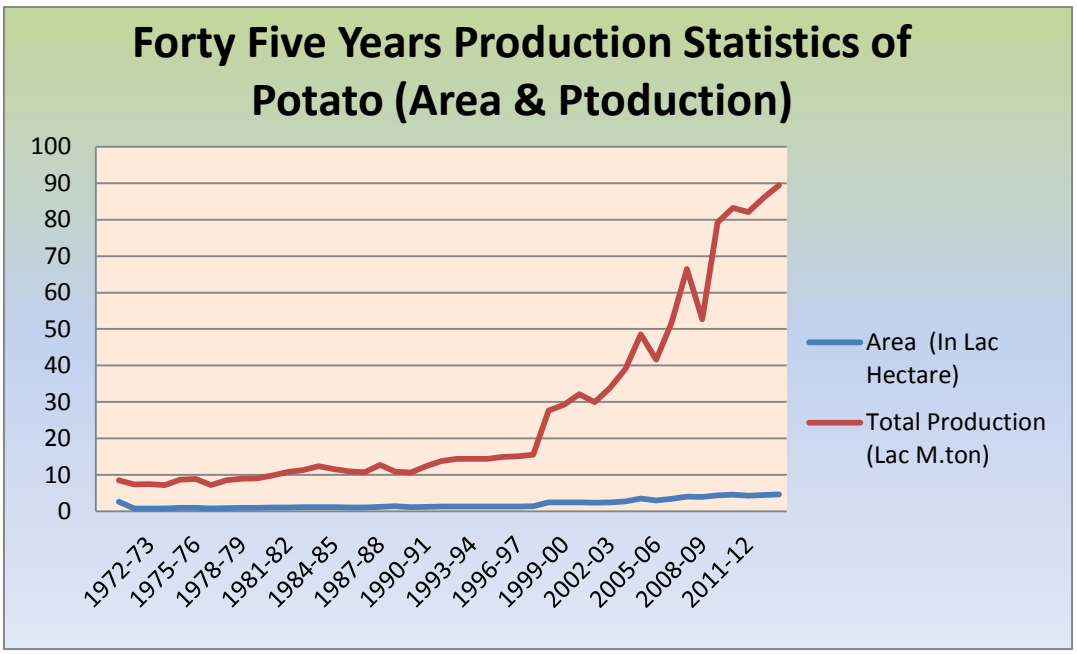

In Bangladesh, potato is primarily used as a vegetable, although in many countries of the world it constitutes the staple food and contributes more than 90% of the carbohydrate food source. In Bangladesh, although the principal use of potatoes is to make potato curry along with fish, meat, and eggs, there exists a great diversity in the consumption of potatoes. Notable among potato-based food items are the boiled potato, fried potato, mashed potato, baked potato, potato chop, potato vegetable mix, potato singara, potato chips, French fry etc. In recent years, bakeries and fast food shops have started preparing a wide variety of potato-based dishes.

Chapter IV

WHEAT

Wheat is one of the most important winter crops.

In this review, we provide an up-to-date and detailed account of wheat research of Bangladesh and the impact that global warming may have on agriculture, especially wheat production. Although flooding is not of major importance or consequence to the wheat crop at present, some perspectives are provided on this stress since wheat is flood sensitive and the incidence of flooding is likely to increase.

Scientific name of Wheat is Triticum. It is a cereal grain, (botanically, a type of fruit called acaryopsis) originally from the Levant region of the Near East but now cultivated worldwide.

This grain is grown on more land area than any other commercial food. World trade in wheat is greater than for all other crops combined. Globally, wheat is the leading source of vegetable protein in human food, having higher protein content than other major cereals, maize (corn), and rice. In terms of total production tonnages used for food, it is currently second to rice as the main human food crop and ahead of maize, after allowing for maize's more extensive use in animal feeds. The archaeological record suggests that this first occurred in the regions known as the Fertile Crescent.

Wheat is grown under a wide range of climatic and soil conditions. It however, grows well in clayey loam soils. In Bangladesh it is a crop of Rabi season, requires dry weather and bright sunlight. Well distributed rainfall between 40 and 110 cm is congenial for its growth.

Wheat sown at furrow beds

Wheat field

wheat ear

Wheat normally needs between 110 and 130 days between sowing and harvest, depending upon climate, seed type, and soil conditions (winter wheat lies dormant during a winter freeze). Optimal crop management requires that the farmer have a detailed understanding of each stage of development in the growing plants. In particular, spring fertilizers, herbicides, fungicides, and growth regulators are typically applied only at specific stages of plant development. For example, it is currently recommended that the second application of nitrogen is best done when the ear (not visible at this stage) is about 1 cm in size (Z31 on Zadoks scale). Knowledge of stages is also important to identify periods of higher risk from the climate. Farmers also benefit from knowing when the 'flag leaf' (last leaf) appears, as this leaf represents about 75% of photosynthesis reactions during the grain filling period, and so should be preserved from disease or insect attacks to ensure a good yield.

Harvested wheat grain that enters trade is classified according to grain properties for the purposes of the commodity markets. Wheat buyers use these to decide which wheat to buy, as each class has special uses, and producers use them to decide which classes of wheat will be most profitable to cultivate.

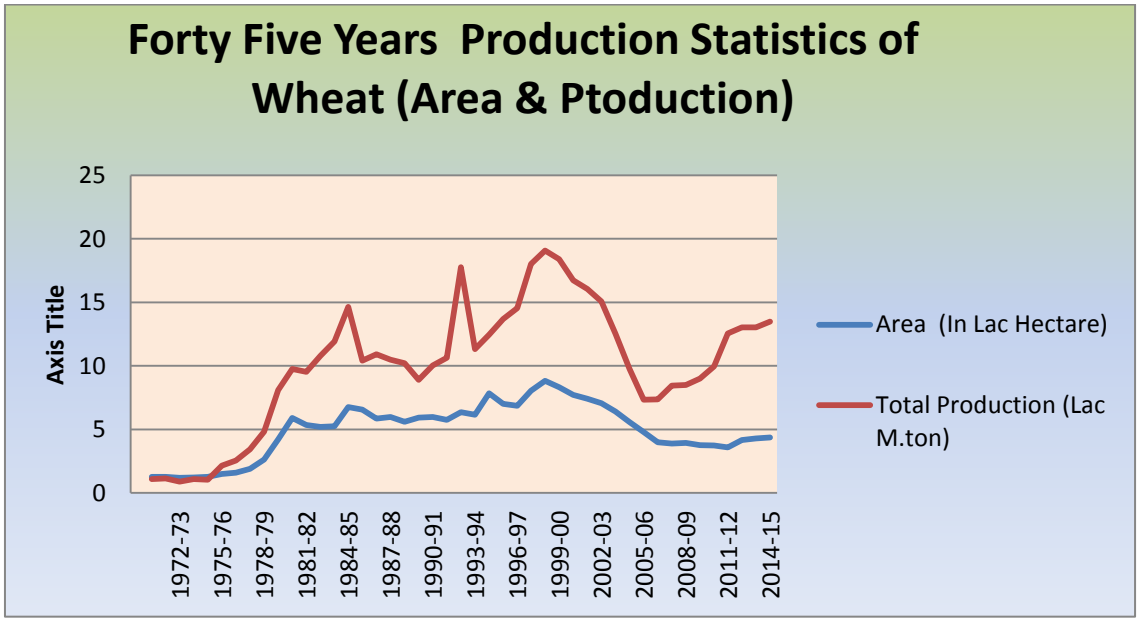

Wheat is widely cultivated as a cash crop because it produces a good yield per unit area, grows well in a temperate climate even with a moderately short growing season, and yields a versatile, high-quality flour that is widely used in baking. Most breadis made with wheat flour, including many breads named for the other grains they contain, for example, most rye and oat breads. The popularity of foods made from wheat flour creates a large demand for the grain, even in economies with significant food surpluses

4.1 Forty Five Years Production Statistics of Wheat

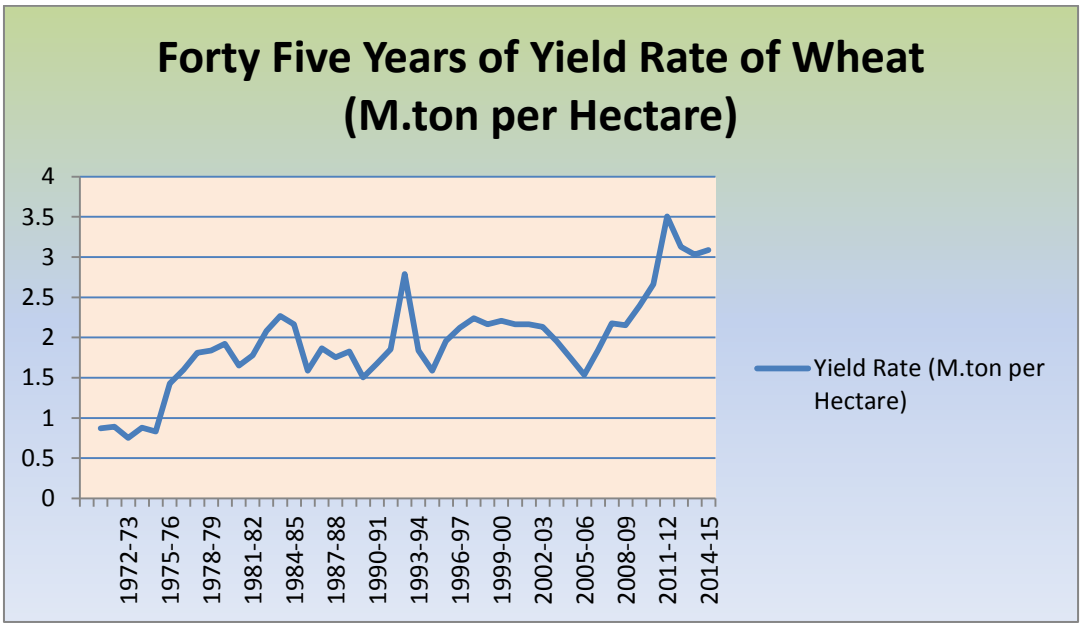

S.l no	Finacial Year	Area (In Acre)	Area (In Lac Hectare)	Total Production (M.ton)	Total Production (Lac M.ton)	Yield Rate (M.ton per Hectare)
